

**GLOBAL M2M  
ASSOCIATION**

# MULTI-DOMESTIC SERVICE

## One platform, one SIM, one experience

The Global M2M Association (GMA) is introducing a revolutionary service on a global scale.

Jointly implemented by GMA operators, the Multi-Domestic Service is an innovative M2M connectivity management service designed to help global enterprises capitalize on the growth of connected devices.

### KEY FEATURES

This innovative M2M connectivity management service offers enterprise customers:

#### One platform

One M2M management platform across the entire GMA footprint means a consistent set of services and functionality.

#### Real-time connectivity management

Enterprises can manage, monitor, troubleshoot and support their global estate of connected devices on one platform, no matter where they are deployed.

#### Powerful administration

Allows flexible definition of different roles and views according to business needs.

#### One SIM

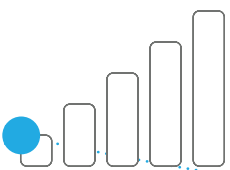

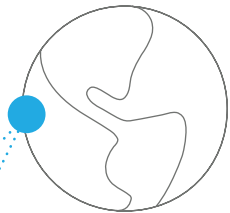

GSMA-compliant embedded SIM (eUICC) that supports remote profile management.

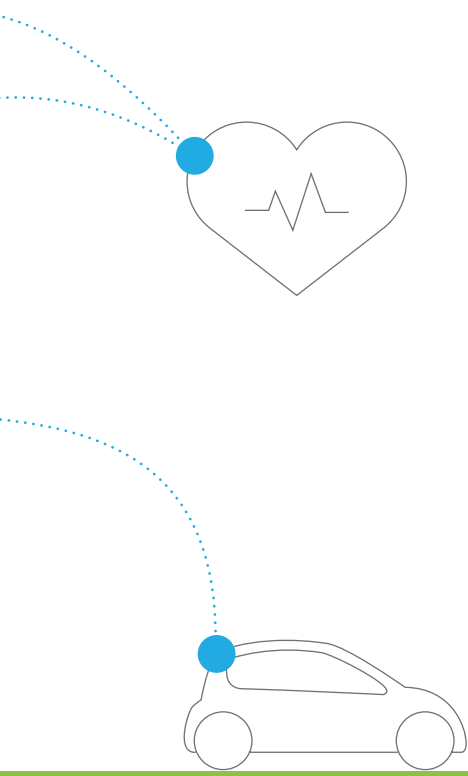

#### SIM localization

SIM will be automatically provisioned with a localized profile within GMA and partners' footprint, giving access to customized end-user offers.

#### Instant lifecycle management

SIM card automatically adapts to the status of the connected products' lifecycle – from manufacturing, testing, shipping and distribution through to the end-user.

## BENEFITS FOR BUSINESSES

The Multi-Domestic Service simplifies the worldwide deployment, management and operations of connected products. Enterprises will benefit from:

### Simplicity

Overcomes the hurdles of fragmented markets with different carriers and technologies by offering one consistent solution over multiple networks and countries, thereby accelerating time-to-market.

### Best-in-class coverage

Global tier 1 operators with an unparalleled network footprint and leading in LTE deployment.

### Service excellence

Ensures superior and enhanced quality of service. e.g. trouble management over multiple operators.

### Lower TCO

Reduces total cost of ownership thanks to efficient provisioning and management of services across a global footprint.

### Future proof

Compliant with local regulations and laws, for instance in countries where permanent roaming is not allowed.

### New services

Enables flexible and on-demand business models for differentiated M2M & IoT applications.

## TEST DRIVE

Visitors to MWC 2015 can test drive a live demonstration at

GSMA Innovation City, Hall 3, Stand 3A11

Ericsson Booth, Hall 2, Stand 2N60

Gemalto Booth, Hall 5, Stand 5A80

Email us to log into a live demonstration of our portal online [contact@globalm2massociation.com](mailto:contact@globalm2massociation.com)

## WHO IS THE GMA?

The GMA is an association of leading mobile operators with world-class networks. Our members include Deutsche Telekom, Orange, Telecom Italia, TeliaSonera, SoftBank and Bell.

We make it easier for global enterprises to deploy and manage M2M services across the world by aligning our operational processes, enhancing service quality and creating common services.

We have proven experience and know-how in supporting business-critical M2M services and collectively connect tens of millions of M2M devices. As established operators with a long history in M2M, you can be assured that our members offer outstanding levels of support and customer care.
